key words

administration, regulation,
management, state, healthcare

The essence and role of management are analyzed, as well as their relationship with the concepts of management and regulation, which are mainly used as synonyms. The difference between these concepts and the relationship between them, carried out by the authors, can be considered a novelty in solving this problem. Today management is characterized at three levels: federal, regional and local. At each level, its tasks and the corresponding type of management (strategic, tactical, operational) are determined. Regulation is also characterized by three criteria: objects; directions; methods (administrative and economic). All criteria are illustrated with relevant examples of government action.
