key words

goal setting, forecasting, planning and programming, socio-economic development, scientific and technological development

In this article, I have reviewed strategic planning documents developed within the framework of goal setting, forecasting, planning and programming processes at the Federal level. The analysis of forecast documents in relation to the development of science, technology and engineering is carried out. Some problematic issues related to the mutual linking and synchronization of forecast documents are highlighted. In particular, I believe that in the next edition of the Forecast of socio-economic development of the Russian Federation for the long term, it is advisable to restore a single section Development of science, technology and innovation, which would strengthen its link with other documents. It is also advisable to coordinate the scenario approaches used in the development of the forecast documents discussed in the article. Prompt resolution of the identified problematic issues will contribute to improving the effectiveness of the implementation of the state scientific and technical policy of the country. The article deals with strategic planning documents developed within the framework of goal-setting, forecasting, planning and programming processes at the Federal level. The analysis of forecast documents in relation to the development of science, technology and engineering is carried out. Some problematic issues related to the mutual linking and synchronization of forecast documents are highlighted.
