key words

medicines, pharmaceutical
substance, excipients, medicinal
products, dosage form

The Federal Law of the Russian Federation On circulation of medicines is the basic law for a large group of specialists in the field of drug production and their sale. The high dynamics of changes of the Federal Law On circulation of medicines creates a significant burden on specialists working in this area. Analysis of the semantic and technical and legal aspects of the main concepts that define the sphere of circulation of medicines in the Russian Federation will provide a comprehensive understanding of the main terms and concepts that determine the regulation of the sphere of circulation of medicines.
