Citation: Bunin G.P., Plushchevskiy M.B. On Development of the Standardization Theory and Role: Once Again, *Kompetentnost' / Competency (Russia)*, 2019, no. 4, pp. 14–21

key words

strategy, competitiveness,
national economy, innovative
development

Economic development of the country and national defense are impossible without the use of methods and means of standardization, we believe. Today, the development of standardization is hampered by the low efficiency of state institutions, insufficient innovation potential, weak development of the financial market and lack of investor confidence in the financial system.

Successful implementation of these problems depends on further improvement of scientific, legal and standardization economic bases taking into account the international and domestic experience, expansion of works on standardization in new directions of development of equipment and technologies. Current stage of the standardization methodological base development in terms of regulatory and technical support can be used standardosophy. Let me remind you that this is the theory of life quality normative, which has been developing since the 1990s.
