рута технического документооборота, требующие улучшения. Была разработана методика улучшения качества процессов согласования и утверждения технической документации с применением элементов теории искусственных нейронных сетей.

Внедрение модернизированного маршрута технического документооборота позволило улучшить качество процессов согласования и утверждения технической документации. ■

key words

system, artificial neural network, technical documentation, quality, evaluation, modernization

An approach to the development of a methodology for improving the quality of the route of approval and approval of technical documentation of an enterprise manufacturing high-tech products is proposed. The traditional route of technical document flow is considered, its modernization is carried out with the help of elements of the theory of artificial neural networks. A quality model has been selected, according to which a methodology for improving the quality of the approval route has been developed and approval of technical documentation. Formulas are proposed for calculating performance indicators, efficiency, partial and complex quality indicators of the technical document management system under consideration. An assessment of the quality of the modernized technical document flow was carried out.
