key words

technical regulation,
standardization, certification,
personnel qualification

I have considered the current problems of management systems' audits, as well as approaches to the continuous assessment of an organization's quality management system. In the article I have discussed a stable demand for voluntary certification of management systems by most organizations in the world as an important tool that ensures confidence in the quality of products or services in conditions of free competition.

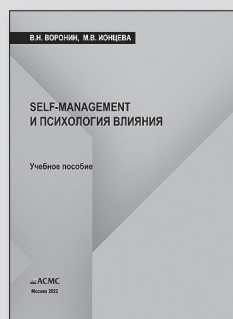

In this regard, I consider the qualification of the personnel of enterprises to be one of the most important problems. I pay special attention to the issues of training university students studying engineering specialties who plans to deal with quality issues. Professionals of this level are very much needed today at enterprises of high-tech products, especially the military-industrial complex. In my opinion, the training programs pay absolutely insufficient attention to the issues of technical regulation. All of the above points to the need to assess the sufficiency of educational programs in higher educational institutes.

Self-management и психология влияния

Учебное пособие. — М.: АСМС, 2022

Описываются общие принципы и закономерности взаимодействия, объясняется психология влияния в ситуациях делового взаимодействия, подробно рассматриваются ситуации, разрешить которые можно только с помощью влияния собственной личности, говорится о самомотивации, time-management и управлении эмоциональным состоянием.

Как известно, self-management, или самоуправление, — это процесс управления собой для достижения собственных целей, который позволяет оптимально использовать собственные возможности, сознательно управлять событиями, способствует формированию самодостаточной, гармонично развивающейся личности.
