key words

e-learning, end-to-end technologies, digitalization, digital educational content, digital twins

An overview of modern research in the field of application of artificial intelligence technologies in education is provided, and experience in the field of legislative regulation of this area. Promising areas of integration of artificial intelligence technologies into the educational process and proposals for ensuring technological leadership in this area were identified.

Authors predict that the use of generative artificial intelligence as an auxiliary tool for developing digital educational content and supporting educational activities will become widespread. To prepare the professional community for using these tools, the Academy is implementing a professional development program called Artificial intelligence in corporate training. This program is specifically designed for corporate universities and training centers that offer professional development and retraining programs as a part of continuing professional education.

Техническое регулирование сквозных цифровых технологий в Российской Федерации

Учебно-методическое пособие. — М.: АСМС, 2024

Пособие адресовано широкому кругу читателей, интересующихся вопросами регулирования сквозных цифровых технологий в Российской Федерации. Дается определение понятия «сквозные цифровые технологии», приводятся примеры таких технологий, рассматривается их взаимосвязь и взаимовлияние, формулируются задания для первичного закрепления материала в учебном процессе.

Пособие рекомендовано к применению в учебном процессе на заседании кафедры «Техническое регулирование на евразийском пространстве» ФГАОУ ДПО АСМС.
