## key words

state registration, technical regulations, perfumes and cosmetics, nanomaterials

The procedure for confirming of perfumery and cosmetic products is carried out in accordance with the requirements of the technical regulation of the Customs Union TR TS 009/2011 On the safety of perfumery and cosmetic products. Products containing nanomaterials deserve special attention. For this type of cosmetic products, according to Appendix N 12 of this TR, the State registration is used as a conformity assessment. State registration of perfumery and cosmetic products is carried out by the Federal Service for Supervision of Consumer Rights Protection and Human Welfare (Rospotrebnadzor) with the issuance of a Certificate of State registration.

State registration of perfumery and cosmetic products made on the EAEU territory is carried out at the stage of their production. While import — before their import into the customs territory using a significant package of accompanying documents.

We believe that the updating of information on nanomaterials, the tightening of requirements for the content of substances in products, new requirements for the conformity assessment procedure must be constantly taken into account in order for the manufactured product to fully satisfy the needs of the consumer and have a competitive advantage over other market participants.
