## key words

higher education, professional standards, bachelor, master, specialist, additional education

We considered the issues of higher education reform and the project of creating a system of professional standards as well as analyzed the levels of interaction of educational standards of 3 ++ series with professional standards in the framework of higher education. We believe that while development of educational standards one can not focus on demand, as it comes from a primitive economy and the past historical period. It is necessary to agree that there is no single approach to harmonizing the requirements of professional and educational standards if we want to achieve consensus in society and in professional communities regarding the convergence of labor and education markets. Depending on the type and level of education, educational standards can be differentiated in accordance with the degree of their coordination with professional standards.
