## key words

pharmaceutical products, safety,  
quality, medicines, import  
substitution

The absolute dependence of society in food and medicine is a fundamental imperative of national security, the ability of a nation to meet the needs necessary for its self-preservation, selfreproduction and self-improvement. We have analyzed the most important federal laws, decrees of the Russian Federation Government and other bylaws aimed at the phased solution of the security problems of the Russian Federation, including food and medicine problems, and have talked about the history of the emergence and establishment of pharmacy in Europe and Russia. We have also examined the concepts of pharmacy and pharmaceuticals, studied the current state of the country's pharmacological and food industries, including Moscow and Moscow Region, the growth rates of the Russian pharmaceutical industry, and made recommendations for eliminating the shortage of the medical and pharmaceutical industry in professional staff of senior and middle management.
