key words

healthcare, legislation,
 pharmaceuticals, food safety,
 drug safety, educational safety,
 pandemic

We have examined the most important legal and by-laws aimed at strengthening the national security of the country, protecting its citizens from various crisis situations, including the lack of high-quality and affordable medicines, food and educational provision. We believe that a significant part of legislative acts, state programs, decrees and departmental decisions are not being implemented due to the non-core educational preparedness of the executors, insufficient funding, and irrational use of allocated funds. The world is experiencing a pandemic today. In our opinion, the fight against it will be won by countries that have professionally trained healthcare, modern medicines and food supplies. The decisive role in ensuring the national security of the population is played by the quality of domestic legislation and the obligation to comply with it. It is necessary to comply with the norms of food, drug and educational security as the basis of national security. To eliminate the main shortcomings of the system outlined in the article, we have offered some recommendations.
